FoilGen

Xie Yu

1 介绍

FoilGen用来将单一2D的foil截面生成面。

2 类结构

输入 input:

• SizeZ:z向尺寸

• Scale:缩放系数

• Rotz:绕z轴转角

• Roty: 绕y轴转角

• Rotx:绕x轴转角

• Dz:沿z轴移动距离

• Dy: 沿y轴移动距离

• Dz:沿x轴移动距离

• Foil: 2D的翼型参数

参数 narams:

• Origin:原点

• Name: 名称

输出 output:

• Layer:引导线,控制截面和网格参数

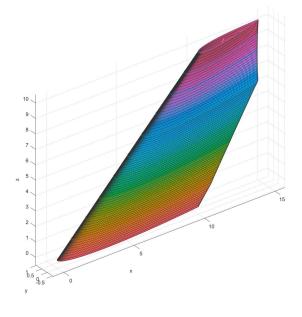

• Mesh: 曲面网格

3 案例

3.1 Create foil NACA 0010 (Flag=1)

```
1 % Foil 2D
   inputStruct1.Alpha=0;
    inputStruct1.FoilName='NACA 0010';
   paramsStruct1=struct();
    obj1=foil.Foil(paramsStruct1, inputStruct1);
 6
   obj1=obj1.solve();
 7
    % Foil 3D
    inputStruct2.Dz=(1:10)';
    inputStruct2.Dx=(1:10)';
10
    inputStruct2.Rotz=[1,2,3,4,5,6,7,8,9,10]';
11
    inputStruct2.Rotx=[1,2,3,4,5,6,7,8,9,10]';
12
    inputStruct2.Scale=[1,0.98,0.96,0.94,0.92,0.9,0.8,0.7,0.6,0.5]';
13
    inputStruct2.Foil=obj1.output.Coor*10;
   paramsStruct2.Origin=[0,0];
15
    obj2=foil.FoilGen(paramsStruct2, inputStruct2);
16
   obj2=obj2.solve();
17 | Plot2D(obj2);
18 | Plot3D(obj2);
```
