LaminatePlate

Xie Yu

1 介绍

LaminatePlate用于建立层合板网格。

2 类结构

Order Plymat Assembly1 Offset Orient Assembly Type input output on params Name Meshsize ShellMesh Material Hole SolidMesh

输入 input:

• Tply: 铺层厚度

• Plymat: 铺层材料编号

• Orient: 铺层角度

• Meshsize: 网格大小

• Hole: 开洞几何

• Outline: 外轮廓线

参数 params:

Order: 单元阶数Offset: 売单元偏置

• Name: 名称

• Material:复合材料属性

输出 output:

• Assembly1: 売网格装配

• Assembly:实体网格装配

• ShellMesh: 壳网格

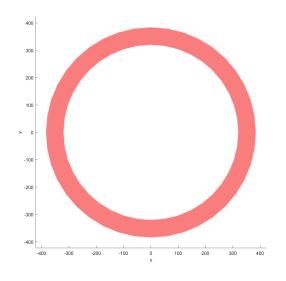

• SolidMesh: 实体网格

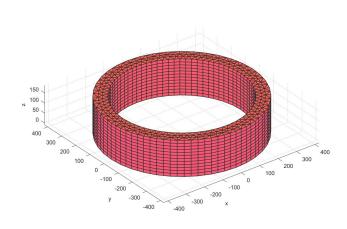

• Surface:截面

3 案例

3.1 Laminate plate demo(Flag=1)

```
% Plate 1
    IR=640/2;
    OR=768/2;
4
   a=Point2D('Point Ass1');
    a=AddPoint(a,0,0);
5
    b=Line2D('Line Ass1');
7
    b=AddCircle(b,OR,a,1);
8
9
    h1=Line2D('Hole Group1');
    h1=AddCircle(h1,IR,a,1);
10
11
12
    load('Ply.mat'); %#ok<LOAD>
13
    mat1{1,1}=Ply.output.Plyprops;
14
15
    inputplate1.Outline= b;
    inputplate1.Hole = h1;
16
    inputplate1.Orient=repmat([0,90,45,-45]',3,1);
17
18
    inputplate1.Tply=repmat(15,12,1);
19
    inputplate1.Plymat=ones(12,1);
20
    paramsplate1.Material = mat1;
21
    obj1=plate.LaminatePlate(paramsplate1, inputplate1);
22
    obj1 = obj1.solve();
23
24
   Plot2D(obj1);
25
    Plot3D(obj1);
```
