## NonHertzContact

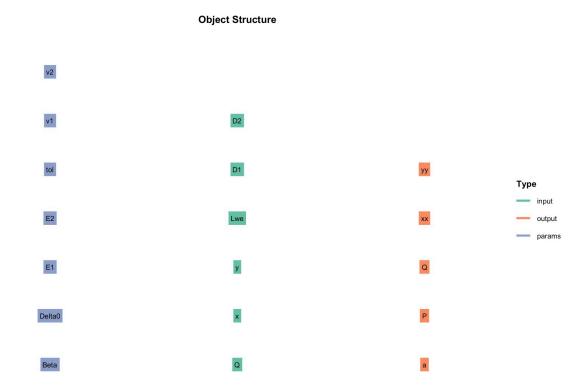

Xie Yu

### 1 介绍

NonHertzContact用来计算非赫兹接触问题。

## 2 类结构

### 2.1 Roller\_Calculation

### 输入 input:

D2: 半径2D1: 半径1

• Lwe:滚子有效长度

• y:滚子轮廓长度方向坐标

• x:滚子轮廓径向

• Q:载荷

#### 参数 params:

v2:泊松比2v1:泊松比1

• tol: 计算精度

Delta0: 初始变形E2: 弹性模量2

• E1:弹性模量1

• Beta: 倾角

#### 输出 output:

• yy:滚子轮廓长度方向坐标

• xx:滚子轮廓径向

• Q:接触力

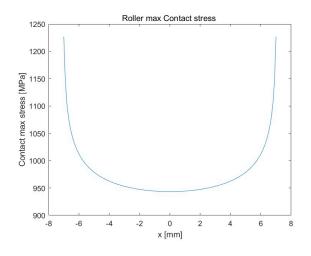

• P:滚子最大接触应力

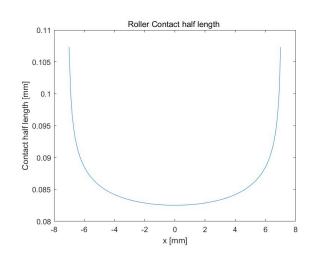

• a:滚子接触半宽

#### 3 案例

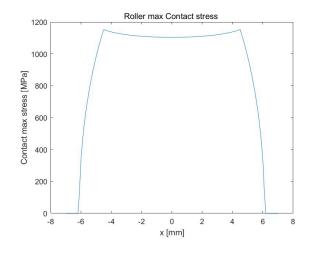

```
1
    Lp=9;
    Rc=1800;
    Dw=10;
 4
    L=14;
 5
    x=-L/2:0.1:L/2;
    % y=0.*(abs(x)<=Lp/2)+...
 6
          (Rc-(Rc^2+(Lp/2)^2-x.^2).^(1/2)).*(abs(x)>Lp/2);
8
    y=x.*0;
    % input1Struct.Q=920;
    input1Struct.Q=1840;
    input1Struct.x=x;
11
12
    input1Struct.y=y;
    input1Struct.Lwe=L;
13
    input1Struct.D1=Dw;
15
    input1Struct.D2=1000;
16
    % params1Struct.Beta=0.0172;
17
    params1Struct.Beta=0;
18
    Roller_Stress=method.Non_Hertz_Contact.Roller_Calculation(params1Struct,input1Struct);
    Roller_Stress=Roller_Stress.solve();
    PlotProfile(Roller Stress)
    PlotP(Roller_Stress)
21
   Plota(Roller_Stress)
```

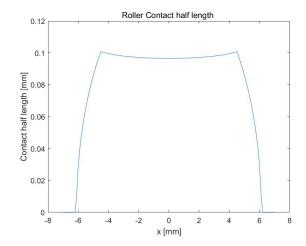

无修形滚子最大接触应力和接触半宽,可以看到滚子两端的应力集中非常严重:

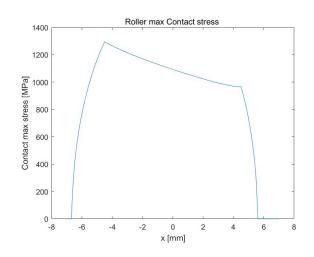

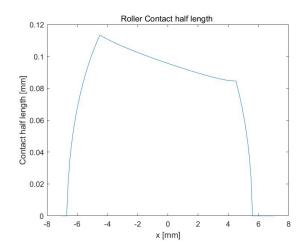

圆弧修形滚子的最大接触应力和接触半宽,圆弧修形后,两端的应力有所降低,但在圆弧分界处仍然存在应力集中的现象:

滚子倾斜0.0172°后的接触应力:
